 Indirect Ophthalmoscope
 Slit Lamp Biomicroscopy
 Gonioscopy
 Other: _____

PARTS EXAMINED:
 Adnexa
 Cornea
 Iris
 Lens
 Vitreous
 Fundus
 UNAFFECTED AFFECTED

INHERITED EYE DISEASE STATUS

This section applies only to those breeds in which the named conditions are known to be inherited and which are listed under the Australian Canine Eye Scheme Schedule 1 on the date of examination. Results will be forwarded to the ANKC inherited diseases database but will be made public only for OPEN REGISTER breeds.

CONGENITAL (present at birth)
 (CEA) Collie Eye Anomaly
 (MRD) Multifocal Retinal Dysplasia
 (TRD) Total Retinal Dysplasia
 (CHC) Congenital Hereditary Cataract
 (PHPV) Persistent Hyperplastic Primary Vitreous
 (PPM) Persistent Pupillary Membrane
 (G) Goniodysgenesis

NON-CONGENITAL (appears later in life)
 (GPPA) Generalised Progressive Retinal Atrophy
 (RPED) Retinal Pigment Epithelial Dystrophy
 (HC) Hereditary cataract
 (PLL) Primary Lens Luxation

The age of onset of non-congenital inherited eye disease varies in different breeds and between individual dogs. It is therefore important to follow any advice given at the time of this examination with regard to the necessity for and frequency of eye examinations as set out in the information for Owners' document available from AVA at www.ava.com.au/aces. "Affected" signifies that there is visible evidence of the inherited disease(s) specified, whereas "Unaffected" signifies that there is no such evidence.

I have examined the above animal (and confirmed its identity) under the Rules of the AVA-ANKC Australian Canine Eye Scheme, with results as shown. Interpretations of eye signs as reported in this form are those of the individual panelist and do not necessarily reflect the opinion of all registered specialists.
